

## Equations of Motion

2005	<p><b>A2.</b> A ball is projected vertically from ground level. The ball attains a maximum height of 49 metres before returning to the ground.</p> <p>Assuming only the action of gravity, calculate the time of flight of the ball.</p>	5
2007	<p><b>A4.</b> An athlete runs a 200 metre race, along a straight horizontal track, in 30 seconds. She accelerates uniformly from rest for 4 seconds, reaching a maximum speed of <math>V \text{ m s}^{-1}</math>. She runs at this speed for 24 seconds before decelerating uniformly for the final 2 seconds, finishing the race with speed <math>(V - 6) \text{ m s}^{-1}</math>.</p> <p>Sketch the speed-time graph for the race and calculate the value of <math>V</math>.</p>	4
2008	<p><b>A2.</b> Towards the end of a long-distance race, Tessa is running at a uniform speed of <math>2 \text{ m s}^{-1}</math>. When she is 120 m from the finishing line she starts to increase her speed. In doing so, she accelerates uniformly at <math>0.25 \text{ m s}^{-2}</math> for <math>T</math> seconds until she crosses the finishing line.</p> <p>Show that <math>T</math> satisfies the equation</p> $T^2 + 16T - 960 = 0$ <p>and hence find her speed as she crosses the finishing line.</p>	6
2010	<p><b>A1.</b> As a set of traffic lights changes to green, a car accelerates uniformly from rest along a straight horizontal road at <math>a \text{ m s}^{-2}</math>. At the same instant, a lorry travelling at constant speed <math>U \text{ m s}^{-1}</math> overtakes the car.</p> <p>Find an expression, in terms of <math>U</math> and <math>a</math>, for the distance travelled by the car when it draws level with the lorry.</p>	4
2012	<p><b>A3.</b> A sprinter competes in a 100 metre race along a straight track.</p> <p>He starts from rest and for the first 4 seconds he has speed <math>\left(\frac{13}{2}t - t^2\right) \text{ m s}^{-1}</math>. For the the next 6 seconds he maintains a constant speed of <math>10 \text{ m s}^{-1}</math> before decelerating at <math>0.4 \text{ m s}^{-2}</math> for the remainder of the race.</p> <p>Calculate the total time taken by the sprinter to complete the race.</p>	6
2015	<p><b>A2.</b> An automated train is programmed to move from rest under constant acceleration to a maximum speed of <math>20 \text{ m s}^{-1}</math> in a distance of 300 m. It is brought to rest under uniform deceleration in 15 seconds. Two stations are 5 kilometres apart and the train is programmed to stop at each station.</p> <p>Find the time taken to travel between the two stations.</p>	5
2016 SP	<p><b>5.</b> A particle is projected vertically upwards at a speed of <math>14.8 \text{ m s}^{-1}</math> from a point O. Two seconds later a second particle is projected vertically upwards from O at a speed of <math>5.2 \text{ m s}^{-1}</math>.</p> <p>(a) Calculate the value of <math>t</math> when the two particles collide assuming that the only force acting is that due to gravity.</p> <p>(b) Determine the distance the particles are above O when they collide.</p>	4 1
2016	<p><b>7.</b> An object of mass 9 kg starts from rest at an origin and moves in a straight line so that its acceleration in <math>\text{m s}^{-2}</math> is given as <math>a = 4 - \sqrt{t}</math>, where <math>t</math> is the time in seconds.</p> <p>Calculate its maximum speed and hence the increase in kinetic energy.</p>	4

## Time Graphs

2011	<p><b>A2.</b> The speed-time graph of the motion of a car as it travels along a straight road is shown below. The car accelerates from <math>O</math> and passes markers on the road at <math>A</math>, <math>B</math>, <math>C</math> before stopping at <math>D</math> after 120 seconds. The car passes <math>A</math> after 40 seconds, <math>B</math> after <math>T_B</math> seconds, and <math>C</math> after 100 seconds.</p>  <p>The speed of the car between <math>A</math> and <math>B</math> is given by <math>v_1(t) = -\frac{1}{2}t + 45</math> (<math>40 \leq t \leq T_B</math>) and between <math>B</math> and <math>C</math> by <math>v_2(t) = \frac{1}{8}t + \frac{15}{2}</math> (<math>T_B \leq t \leq 100</math>), where the speed is measured in metres per second and time <math>t</math> is measured in seconds from the beginning of the motion.</p> <p>(a) Calculate the speed of the car at <math>B</math>. <span style="float: right;">3</span></p> <p>(b) Calculate the distance between <math>B</math> and <math>D</math>. <span style="float: right;">3</span></p>
2016 SP	<p><b>4.</b> A train travels from Glasgow to Stirling. It starts from rest and accelerates uniformly for the first 9 km of its journey. It then travels for 46.8 km at a uniform velocity, before decelerating uniformly to rest in 7.2 km. The total journey time is 33 minutes.</p> <p>(a) Sketch a velocity-time graph with appropriate units to represent this journey. <span style="float: right;">2</span></p> <p>(b) Calculate, in <math>\text{km h}^{-1}</math>, the maximum speed reached by the train. <span style="float: right;">4</span></p> <p>(c) State <b>one</b> assumption you have made in answering this question. <span style="float: right;">1</span></p>
2016	<p><b>6.</b> A remote controlled aircraft is flown from point A to point B. It accelerates for 10 seconds at a constant rate from rest to a take-off speed of <math>15 \text{ m s}^{-1}</math>. Once airborne, it accelerates for a further 20 seconds at a slower constant rate to a cruising speed of <math>u \text{ m s}^{-1}</math>. It maintains this speed for 60 seconds until it lands. The aircraft then decelerates for 10 seconds to a complete stop.</p> <p>(a) Sketch a speed-time graph of the journey, clearly showing all the important information. <span style="float: right;">2</span></p> <p>(b) (i) If the distance travelled from A to B is 1.725 km, calculate the value of <math>u</math>. <span style="float: right;">2</span></p> <p>(ii) State one assumption you have made about the path of the aircraft during your calculations. <span style="float: right;">1</span></p>
